Claims

[c1] I claim the *Matrix Network Control System* and *Matrix Naming Structure* outlined in this patent as my invention.

The *Matrix Naming Structure* specifically includes creating a matrix, a collective structure containing sub-objects, that is represented by number(s), letters(s) or an alpha-numeric combination, separated by a space, then combined with an identifying name, number, or alpha-numeric combination to form a root definition. The naming structure also includes developing branches using the "|" character and using the "@" character to form aliases. The *Matrix Network Control System* specifically includes developing a network structure using the *Matrix Naming Structure* , including the development of the Global Matrix.
